

## Section 24(c) Special Local Need Label

**FOR DISTRIBUTION AND USE ONLY WITHIN THE STATE OF  
MONTANA**

### **TOUCHDOWN<sup>®</sup> CT Herbicide**

**EPA Reg. No. 100-1212  
EPA SLN No. MT-060007**

#### **For Use As A Preharvest Aid For Weed Control in Flax**

FAILURE TO FOLLOW THE DIRECTIONS FOR USE AND PRECAUTIONS ON THIS LABEL  
MAY RESULT IN POOR WEED CONTROL, CROP INJURY, OR ILLEGAL RESIDUES.

---

#### **DIRECTIONS FOR USE**

---

It is a violation of federal law to use this product in a manner inconsistent with its labeling.

Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA-registered Touchdown CT label.

This label must be in the possession of the user at the time of application.

#### **Flax (excluding flax grown for seed)**

Apply as a spot treatment or a broadcast application to mature flax to control Canada thistle, perennial sowthistle, or other labeled weeds.

Apply as an over-the-top spray to control labeled weeds prior to the harvest of flax. Apply between 24 fluid ounces and 2.2 quarts in 3 to 20 gallons of water per acre when the crop is physiologically mature and nearly ready to harvest. Apply when the crop has 30 percent or less grain moisture; approximately 80% of the seed should show a color change at this stage. Either ground broadcast or aerial applications may be made. A 1.5 percent v/v solution can be used when using hand-held or backpack sprayers.

**General Use Precautions:**

- Greater efficacy against perennial weeds may be achieved if a period of 10-14 days is allowed between treatment and crop harvest
- Do not exceed one application per year for this use.
- Make application at least seven days before harvest.
- There are no rotational crop restrictions following Touchdown CT application.
- When making aerial applications, do not exceed 24 fluid ounces/A.
- Do not apply to flax grown for seed.
- Do not apply through any irrigation system.
